SUBJECT - Improvement of water supply in the Tumkur Town Municipality

Tumkur Town was provided with a system of protected water supply in the year 1928 at an estimated cost of Rs 4,50,000 The scheme then executed was designed to serve the population of 15,000 in the Town at That Time Tumkur Town has since expanded, new layouts have been formed and its population has also increased On account of this expansion and increase in population, the present supply of water is found to be inadequate, specially in certain portions of the extensions of the Town.

In order to cope with the present demand, the Sanitary Engineer has, at the request of the local Municipal Council, prepared an estimate for Rs 1,62,660/- for the improvement of water supply at the place The proposed improvement consists in the construction of R C C tanks, installation of extra pumps, and laying of new distribution lines etc The estimate has been scrutinised by the Chief Engineer for Irrigation and found to be in order

The scheme is proposed to be financed by the Government and the local Municipal Council in equal proportions In order to enable the Municipal Council to meet its share of the cost, a loan of Rs 81,330 equal to half the estimated cost, carrying interest at 3½% and repayable in 20 annual instalments is prayed

for

for by the Tumkur Town Municipal Council It is reported by the President that the loan will be repaid ~~yearly~~ out of the realisations under octroi revenues

(It is considered that Tumkur being an important and growing place should have a good water supply installation and that necessary financial assistance should be given to the Municipal Council to achieve this important object The Financial Secretary has no objection to the proposals as submitted by the Municipal Council, being sanctioned The work will be started with the loan to be advanced to the Municipality during the current year A sum of Rs.81,330/- will be given as an outright grant by the Government for the purpose out of the provision to be made in the State Budget for the year 1947-48 for the improvement of water supply in Towns and Minor Municipalities The Minister for Revenue and Communication ~~and the Dewan~~ have also agreed

Points for orders are -

1 Sanctioning the estimate for Rs 1,62,660/- for the improvement of water supply in Tumkur Town,

2 Financing the scheme by the Government and the local Municipal Council in equal proportions, the Government share of the cost amounting to Rs 81,330/- being given out of water supply grant for the year 1947-48,

3 Advancing a loan of Rs 81,330/- with interest at 3½% and repayable in 20 annual instalments to the Municipal Council to enable it to bear its share of the cost)

hca

The Financial Secretary has no objection to the proposal of the municipal council as detailed above.

When the papers came to me I noted as below

"Trunkroad being improvement works," the work is proposed to be started

The Dewan & the other Ministers of Council are agreeable to the above proposal

which may be granted

~~& sanction the~~ ~~proposal~~ approved

Minister for Roads & Communications

11 cl/y from town
reg of roads

with the loan of Rs 81330 to be advanced to the Municipal Council during the current year & sum of Rs 81,330 will be given as an outright grant by the Govt for the purpose out of the provision to be made in the State Budget for the year 1947-48 for the upkeep of roads, bridges & minor improvements

Sir,

Subject - Improvement of water supply to the Tumkur Town

I have the honor to forward herewith the entire file of correspondence ending with the Tumkur town Municipal President letter No A 91/45-46 dated 18th January 1946 on the above subject and to state as follows -

2 The President Tumkur Town Municipal Council states that the town was provided with a protected water supply scheme at a cost of Rs 4 5 lakhs about seventeen years ago and owing to the increase of population and growing importance of the town it has become difficult to meet the requirements of the townspeople from the existing source of supply

It is stated that there is some defect in the service reservoir and the distributor mains and sub-mains which is dependent on gravity He further states that as a result of the water difficulty the Municipal Council have attempted to remedy it at a cost of Rs 5300/- during the years 1943-44 and 44-45 which did not prove helpful to mitigate the problem of satisfactory water supply scheme for the town

3 The President states that the management of Tumkur town waterworks was handed over to the Bureau of Sanitary Engineering on 10-5-1940 as per G O No 7070-A/Ml 156-39-6 dated 10-2-1940 subject to the following conditions

1 that the Municipal Council do pay a sum of Rs 6500/- towards the cost of annual maintenance charges to the Bureau of Sanitary Engineering

2 that all private house connections should be metered

It is further stated that the annual maintenance charges payable by the Municipality have been on the increase and has mounted up from 3400 s r the year 1937-38 to Rs 20 700/- during 1945- 6 hich is stated to have been paid ith great difficult

5 It is stated that the average consumption of ater was 2 4 lakhs of gallons per day when the management was handed over to the Bureau of Sanitary Engineering and it is now registered at 6 lakhs of gallons per da In order to meet the increased demand of water, a loan of Rs 30,000/- was sanctioned b Government in their Orde No L 12008-7a/ 59-40-18 dated 28th June 1942 and the amount was not utilised as the scheme as deferred by the Municipal Council due to war conditions

6 The President states that after repeated representations to the Le an and Minister and the Chief Engineer for Irrigation by several deputations of the public, the Chief Engineer for Irrigation has prepared a scheme to improve the water supply of the to n at a cost of Rs 1,62,660/- in consultation with the Sanitary Engineer

7 On 3-10-1945 a Special Ge eral meeting was held the subject was fully discussed thereon and it as unanimously resol ed to take up the new scheme and request Government to sanction half the estimated cost of the sc eme as Government grant viz Rs 81,330/- and to grant the other half as loan to the Municipality repayable in easy instalments

8 The President states that there is a saving of Rs 23,700/- and odd annually hich will be utilised to meet first the cost of the drainage scheme and the improvement of water supply scheme to the To n

9 As regards the number of instalments for repayment of the loan fairly long period ma kindly be fixed to enable the Municipal Council to repay the same

10 In these circumstances I request that sanction of Government may kindly be obtained to the resolution of the municipal Council and communicated early.

I have the honor to be,

Improvement of Water Supply to the Tumkur Town

Sir

I have the horour to state that the system of protected ater Supply to the Tumkur Towr has been proviced by the Muricipal Courcil at a cost of Rs 4,00,000/- It is row 17 years since the system was provided ard several factors including increase in the populatior, more public fourtairs ard more house correctiors all over the towr, have contributed to ar acute inadequacy of the supply The old towr area is supplied by the Aydala Tark, besides two bore wells have been put up at the northern ard southern extremity of the tow to supplement the needs of the extension ard outlying parts of the Muricipality Inadequate supply is a general feature all over the towr ard the complaints cover a wide range betweer total failure ard intermittent supply

2 The chief fault of the system has been traced to the deficient Head of the Service Reservoir, which is constructed at the Filters situated at a height about twenty and add feet above the level of the towr area The flow of water in old distributary mains ard submains is dependent on gravity The other defect has been found to be a faulty layout of submains of the row calibre feeding house correctiors of old proportion to the capacity of the submains The Courcil have attempted to remedy the second fault in the area where its effects were most felt A sum of Rs 2,624/- has been expended by the Muricipal Courcil to improve the water supply in the following localities during the years 1943-44 ard 44-45

(i) to correct the 7" supply mains with distributary of 1½" submains in the Krishnapuram Colony Extension at a cost of Rs 1,014/-

(ii) for laying submain at cost of Rs 1,210/- for the improvement of water supply to the Eastern Extension, Tuticorin

3 The management of the Tuticorin Water Works was handed over by the Municipal Council, to the Bureau of Sanitary Engineering on 10-4-1945 in pursuance of Government Order No 7070-A/1 106-B-6 dated 10-4-1944. After detailed discussions held between the Government and the Municipal Council it has been stipulated -

(i) that the Municipal Council do pay a sum of Rs 6,000/- towards the cost of Annual Maintenance charges to the Bureau of Sanitary Engineering and

(ii) that all private house connections should be metered

Annual maintenance charges payable by the Municipality have been increased and the same have been paid for all these years with the greatest difficulty as per details noted below and for the current year it is further increased by Rs 100/- more

1	1937-	3,43-0-0
2	38-	5,56-0-0
3	39-40	5,[illegible]-0-0
4	40-41	6,71[illegible]-0-0
5	41-42	10,1[illegible]-0-0
6	42-43	15,870-0-0
7	43-44	13,307-0-0
8	44-45	20,600-0-0
9	45-46	20,700-0-0

4 While the maintenance charges have been mounting up every year there has not been corresponding any improvement whatever in the supply of water to the town. The Bureau of Sanitary Engineering have pointed out that while the consumption of water was 2.4 lakhs gallons per day, when the management was handed over it is now registered at 3 lakhs of gallons per day and even more. Even now there has been no improvement and while the Council bear the responsibility for collecting the maintenance charges

Area of Sanitary Engineering is unable to meet the requirements of the town. This necessity has been recognised by Government as far back as 10-2-1940 in laying down the condition No 3 in the Government Order referred to already. The Council requested the Government to sanction a loan of Rs 30,000/- for meeting all the house connections in the town during the year 1942. Accordingly a sum of Rs 30,000/- repayable in 10 equated annual instalments with interest at 4% per annum to meet the cost of the installations of water metres to the house connections at Tumkur was sanctioned by Government in their Order No L 1000-71/41 S&-40-1 dated -6-1940 and this loan amount was not taken since the scheme was decided by the Municipal Council until the war was over.

For the improvement of water supply to the town of Tumkur several representations are being made to the Dewan Saheb, Ministers and Chief Engineer for Irrigation not to speak of the deputations of the Council that waited upon the Dewan and concerned Ministers to press the urgency of the improvement of water supply. During their visits to this town for several occasions they were pleased to promise to consider our representations favourably. At our request the Chief Engineer for Irrigation in consultation with the Sanitary Engineer prepared a Scheme to improve water supply at a cost of 1,62,660/- On 3-10-40 a special general meeting of the Municipal Council was convened in the office, of the Chief Engineer for Irrigation and the Sanitary Engineer were also present for special invitation with necessary plans and references. The scheme was fully discussed in the council and Chief Engineer for Irrigation xxxxxxxxxxxxxxxxxxxx explained all the aspects of the new scheme and the Council was convinced and thereupon unanimously resolved to implement the new scheme with the help of the Government and sanctioned the estimate amounting to Rs 1,6 ,660/- sent by the Sanitary Engineer for countersignature and return with funds and further resolved that the estimate amounting to Rs 1,62,660/- be accepted and the Government be requested to sanction half the estimated amount i e, Rs 81,330/- as outright water supply grant and the other half as loan to the Municipality as is usually done

by the Government

The Municipality is in a position to pay the loan instalments after making due provision in every budget and the realisation under Octroi Revenue will be earmarked for the repayment of the loan

The normal income of the Municipality for the last 3 Yrs. or an average is Rs 1,27,516/- derived mainly from Toll, Octroi, Mohatarfa and Miscellaneous receipts and the expenditure also for the last 3 years or an average is Rs 1,03,741 the same be the general administration Sanitation charges, Sanitation and contribution due by the Municipality

Actual Receipts

	1942-43	1943-44	1944-45
1 Octroi	1,30,000/-	90,000/-	81,000/-
2 Toll	20,470/-	20,000/-	20,000/-
3 Miscellaneous including Mohatarfa, Water connection charges pound rent for Market buildings, Cutter Stalls Market Gate fees Shandy fees, Manure Sales etc,	100,847/-	60,000/-	47,000/-
Total Rs	1,41,722/-	1,14,830/-	1,50,000/-

It will be seen that there is a savings of about Rs 23,778/- which will be provided first for the repayment of the remaining Water loan as usual and the balance if any for the Town Improvement works This Municipality has been very regular and prompt in repaying the instalments of loan and interest and has never been in default have paid the loan instalments and are not up-to-date Council is taking extra care to keep its expenditure consistent with income The feasibility will be clear out of the following fresh items of income noted below :-

(1) As the revision of assessment has been given effect to from 1-7-45 a sum of Rs 20,000/- is expected to be realised out of the revision

(2) levy of professional tax under profession tax rules, a

a sum of Rs 4,000/- is expected to be realise

(3) a sum of Rs 1,000/- under revised market bye-la

(4) license fees of Rs 2,000/- under dangerous and o ious trades bye-laws

(5) Tobacco license fee of Rs 200/- under revised octroi bye-laws

(6) a sum of Rs 500/- under revised rate of octroi on Timber and tobacco

(7) a sum of Rs 250/- will be realised under Public Conveyance rules

and (8) a sum of Rs 6,000/- will be realised under sale of sites every year on an average

Steps have also been taken to levy octroi on articles such as matches, coffee seeds, cocoa and copra and oil by products etc, which are not taxed till now and is pending before Government for sanction A decent increase under the head of octroi could be expected if sanction is accorded by Government to the levy of octroi on the above mentioned goods

It is thus seen that the help from Government is absolutely necessary to continue and complete the schemes to be taken up

I therefore request you to make suitable recommendation to Government to give half the cost of the water-supply Improvement by way of out-right grant and the other half as loan to this Municipality

A copy of the resolution of the Municipal Council together with the estimate with corrected copies of the plan is sent for favour of kind perusal and for sanction

I have the honour to be,

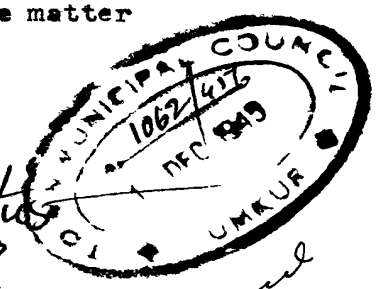
Tumkur Water Supply

I have the honour to forward herewith an estimate amounting to Rs 1,61,200/- together with necessary report and plan for the improvements to Tumkur Water Supply for favour of countersignature and early return with funds for taking further needful action in the matter



I have etc ,

Sanitary Engineer 27/11

Report to accompany the estimate for improvements to water supply to Tumkur Town

The water supply to the town was completed in the year 1[illegible]. It was designed for a prospective population of 15,000 with 0 public fountains to serve the needs of the town

Gradually the town expanded and the population increased to about 27,000 at present The number of public fountains is now 113 and house connections about 750 With the increased demand on the water supply some improvements were tried as installing the booster pumps at Somankatte and another at Ormekere several years xxxxx ago to supplement the xxx water, two bore wells, one at the jail extension and another at Dobb's Bungl w have been put into sevice with dee well power pumps also, the original gravity delivery from Hyaala tank to the filters has been provided with booster pumps to increase the flow By all these means the quantity of water supplied is nearly 3 lakhs gallons per day, including supply from the bore wells Thus a supply of more than 10 gallons per head per day is maintained But the supply is locally very uneven and uncertain to some portions owing to want of pressure in the mains being gravity supply and the incrustation for not having been cleaned since they were laid 17 years ago

Several estimates were prepared from time to time for installing mechanical rapid filters and elevated tank at the source (Hyaala) for an elevated tank of 50,000 gallons capacity at the filters and then for cleaning the mains and sub-mains and for installing meters to check wastage None of these estimates were executed in considerations of their costs Now an estimate for Rs 7,000/- has been sanctioned for constructing an elevated tankof 10,000 gallons capacity for the jail extension which depends for the water spoply on a bore well yielding 800 gallons per hour With this meagre source of supply and the growing of the jail extension and the suburbs adjoining the construction of the General Hospital nearby which will involve a heavey draw on the scanty supply, this work for constructing a 10,000 gallons elevated tank can hardly be expected to meet the demand on it also, there are several other portions of the town where the supply conditions are very unsatisfactory The present estimate has therefore been prepared to provide a scheme. complete system to ensure adequate supply with increased pressure to localites where water supply is poor It is proposed that at the jail extension an additional elevated tank of 10,000 gallon capacity may be constructed and the supply of water to this tank given by pumping water from the existing pump at Somankatte This requires a 4" sub-main of 4,000 feet lenth from 9" main at Bungl re head to feed the pump and and 3" raising main of 4,200 feet from the pump to the elevated tank at the jail extension.

Bomma Sandra extension has very acute water truble, some parts of which do not get water either by day or night To ensure good supply at high pressure an elevated tank of 10,000 gallons capacity is propose at a point in Bangalore Road near 9" main which is much highter than the highest point in the extension For this a small pump house and a new pump and elevated tank are required The existing supply main to the extension will be limited to the elevated tank with the use of very small length of pipe line

Two other localities that suffer constantly are the western extension and the area round about Mandipet Asthere xxx is already a booster pump at Ormekere, it is proposed to be taken advantage of and erecting a 50,000 gallons elevated tank at the highest xxxxxx point nearby and water will be pumped with a small length of raising main A direct " delivery main from the elevated tank is proposed to the distant zone of western extension. The nearby high level locality will be served with the existing distribution main linked to the elevated tank

The Mandipet area will also be similarly served by linking the existing distribution main to the other unit of the elevated tank. Krishnaraja extension supply will get improved by gravity itself when the newly 4" proposed sub-main to feed Somankatte pump is linked to the existing Krishnaraja extension distribution main with a bey-pass connection for supply of water to this extension during pumping hours

To ensure sufficient head and pressure a 10,000 gallons capacity elevated tank on 25' staging is also proposed Provision is made for a pump and pump house also to supply water to the elevated tank

The only other xxxxxxx improvement required here is the replacement of 4" cast iron pipe line in the

in the middle of bar line Road with 3" pipes as there are already 3' pipe lines at tighter end of the road with smaller sizes mentioned above being between these Provision is also made for removing, cleaning, painting the existing encrusted pipe lines as suggested by the Chief Engineer for Irrigation during discussion

Lastly provision is made for erecting steel gravity filters capable of dealing with ½ million gallons of water at cost of Rs 30,000/- as the present sand filters are considered ~~insufficient~~ ineffective to purify the alum treated water

The cost of the work as detailed shown in the estimate with provision ~~of~~ and 12½ % for the Establishment, Tools and Plant charges is Rs 1,42,660/-SW

The estimate is of a very urgent nature and unless it is executed early, the acuteness of water trouble cannot be reduced

Sanitary Engineer

PROCEEDINGS OF THE GOVERNMENT OF HIS HIGHNESS THE MAHARAJA OF MYSORE

Read -

Letter No AG C 3273/37-38 dated 8th March 1939 from the Deputy Commissioner, Tumkur District requesting sanction to the proposal of the Tumkur town Municipal Council to hand over the Control of the maintenance of its water supply works to the Bureau of Sanitary Engineering in the interest of efficient management of the works

2 Correspondence endorsing with letter No C 307-16 dated 12th Jan 1940 from the Director of Public Health in the matter

---

Order No L 7070-2/M1 186-38-5
Dated, Bangalore the 10th February 1940

Government are pleased to sanction the transfer of the maintenance of the Tumkur water supply works to the Bureau of Sanitary Engineering subject to the following conditions -

1) That the Tumkur town Municipal Council should pay a sum of Rs 6,500/- annually and also bear the initial cost on account of improvements, if any, to the works

2) That the present level of consumption of water should be kept up and if a larger supply is required the Municipal Council should pay the extra cost

3) That, if there are private house connections, they should all be metered

The Director of Public Health proposes to engage a water-Inspector or a Sub Overseer on a pay of Rs-50/- per mensem for attending to his work This proposal is approved and Government are pleased to meet the extra cost of Rs 600/- per annum on this account out of the 'Water Supply Grant' Temporarily for a period of 3 years This amount will be treated as a subvention and the position reviewed at the end of three years

SECRETARY TO THE GOVT OF MYSORE
REVENUE DEPARTMENT BANGALORE

Sir

Subject – Improvement of water supply in Tumkur Town

Adverting to your letter No L 12071 dated 1-5-46 calling information regarding the repayment of Government loan prayed for by the Town municipality Tumkur for the above purpose I have the honour to state that the municipal President Tumkur Town states that the octroi income of the municipality will be earmarked for the repayment of the proposed loan and the same will be repaid in 20 equal annual instalments with interest @ 3½% per annum

The presidents letter dated 17-5-46 and the connected file of records are herewith enclosed for kind perusal and early orders of Government

I have the honour to be
Sir
Your most obedient servant

For Deputy Commissioner,
Tumkur District
